## TenPoint Unveils Stealth SS™ Crossbow

Mogadore, OH. New for 2013, TenPoint Crossbow Technologies' Stealth SS™ crossbow has paired their popular, streamlined XLT™ bow assembly with their new FSB, bullpup-style stock and tactical barrel assembly to create a shorter, lighter, and more powerful version of their award winning Stealth XLT™ model.

The key component to the new Stealth is TenPoint's new stock assembly featuring their new FSB™, Functionally Superior Bullpup, stock and a new black anodized, 19.5-inch tactical, aluminum slotted barrel, fitted with a 4-inch bullpup version of the company's patented PowerTouch trigger. The FSB stock uses strategically placed cutouts or ports to reduce weight and improve balance, and its ergonomic design is configured with optimal comb-height and length of pull. Its embedded barrel employs rubber inserts and dual-purpose rubber safety wings to reduce noise and vibration further. The primary function of the wings, however, is to help keep the shooter's fore-grip hand safely below the flight deck.

Like TenPoint's other XLT models, the Stealth SS's bow assembly measures a streamlined 13.5-inches from axle-to-axle when cocked. Its machined riser is fitted with 11-inch IsoTaper Limbs™, MRX™ cams, D-75 string and cables, and a detachable, lightweight, coated aluminum foot stirrup.

The combined assemblies produce an ultra-compact 185-pound draw-weight model that shoots a 420-grain Pro Elite arrow 334 fps. With the new FSB stock and barrel configuration, the Stealth SS measures just 34.4-inches long and weighs only 6.8-pounds, making it the most compact bow TenPoint has ever produced.

"We continue to listen to our customers as we introduce new crossbows to the market place," said TenPoint CEO, Rick Bednar. "The Stealth SS is another of our responses to the demand for more compact, lightweight and quiet crossbow that deliver top-of-the line performance. It's also proof of the old adage, 'good things come in small packages'."

Like all TenPoint models, the Stealth SS also features TenPoint's patented DFIT™ (dry-fire-inhibitor) and a bullpup version of their 3.5-pound patented PowerTouch™ trigger.

Equipped with the ACUdraw™ or ACUdraw 50™, TenPoint's patented cocking units, and the RangeMaster Pro™ scope, the Stealth SS is double-dip fluid imaged in the new Mossy Oak® Blades® camo pattern.

The model sells only as a complete package that includes three, 420-grain Pro Elite carbon arrows with new Omni Nocks™, quiver and Side-Mount Quiver Bracket.

Stealth SS MAP: \$1299 with ACUdraw, \$1199 with ACUdraw 50.

TenPoint is 100% USA owned and operated. All TenPoint crossbows are made in Mogadore, OH.
